

Sahil Singh

RESEARCH / SCIENTIFIC ML / EMBEDDED SYSTEMS

PROFILE

Student researcher working across physics-informed machine learning, biomedical inverse modeling, world-model evaluation, and human-validated satellite imagery.

01 Experience

Research Assistant | MIT STAR Lab

SEP 2026 - PRESENT

Validate news-driven satellite-event detections using temporal imagery; adjudicate visibility windows and document uncertain cases for SkyScraper's human-in-the-loop geospatial pipeline under Prof. Kerri Cahoy and Ms. Anderson.

Research Assistant | Rochester Institute of Technology

JUL 2026 - PRESENT

Study ventricular tachycardia in Prof. Linwei Wang's lab under Sumeet Vadhavkar. Built a reproducible openCARP S1-S2 scar-substrate study, resolving the capture transition at 368-369 ms and a 46 ms directional delay across 24/24 ring sectors.

02 Accepted Research

GEML - Accepted to NeurIPS VeriCodeGen 2026

Studied learned equivalence over expressions compiled to one operator; measured 41x median tree expansion and showed that nine fitted graph models remained near chance under variable-role swaps.

MineOcclude - Accepted to NeurIPS PhysWorldAI and ESR 2026

Built a paired Minecraft benchmark separating visual evidence, motion predictability, and readout effects; achieved 0.083-0.107 block RMSE under visible/glass conditions and characterized failure under opacity.

MIG-PINO Cardiac Field Localization - Accepted to NeurIPS PhysWorldAI 2026

Evaluated FNO and DeepONet on 500 cardiac simulations: held-out LAT/APD90 field R2 reached at least 0.954 while localization Dice exposed failure modes hidden by global accuracy.

03 Selected Engineering & Leadership

CubeSAT Power Subsystem Co-Lead

Modeled generation, storage, duty cycles, and loads; presented at SmallSat 2026 and the NCSS Student Research Conference 2026.

CASCADE | MIT Blueprint

Combined an RNN trained on 7,629 outbreak records with a global SEIR simulator and Monte Carlo Tree Search across 155+ countries.

Distributed Gas-Leak Localization

Built an ESP32 PM2.5/CO2 sensor graph, dual Raspberry Pi 5 cluster, and lightweight U-Net spatial reconstruction pipeline.

Teaching & Math Leadership

AP Calculus BC teaching assistant and Math Olympiad tutor; Leading Officer at Peachtree Math Circle.

04 Additional Projects

Passive Edge-IoT Energy Harvester

Developed a piezoelectric and triboelectric multi-source design; received GSEF Best in Category and a creative problem-solving award.

Autonomous Agriculture Drone

Built a custom 3.5-inch drone with ArduPilot flight control, an Arduino seed payload, and soil-informed deployment; earned CPS Expo 2nd place.

IRIS Face-Recognition Attendance System

Implemented Raspberry Pi inference with automated spreadsheet logging.

EDUCATION

Georgia Institute of Technology

Distance Math Year 1 + CS 1301
Aug 2026 - Present

Fulton Science Academy

Grade 10 | Expected May 2029

TECHNICAL SKILLS

Machine Learning

PyTorch, neural operators, FNO, DeepONet, GNNs, U-Net, RNNs, Monte Carlo dropout

Scientific Computing

openCARP, CellML, BOCF, Biot-Savart modeling, inverse problems, uncertainty quantification

Programming

Python, C++, Java, Linux/WSL, reproducible research workflows

Embedded & Robotics

Raspberry Pi, ESP32, Arduino, sensors, soldering, drones, ArduPilot, CAD/Blender

RECOGNITION

- 2x GSEF Best in Category
- Thermo Fisher JIC Top 300
- 3x Fulton County Science Fair qualifier
- GaSTC state qualifier, grades 6-8; 1st in category twice
- Top 3 Speaker, Ivy Bridge Debate
